> with the implemented server open t[...]n the server
> at the same time. First of all from c[...] by writing
> cd and the location of the client solution file (eg. G:\Desktop\ACW
> 1\whereis\whereis\bin\Debug). After that type "telnet localhost 43" to connect the client
> with the server and then write "hello". The client and the server window will display the
> above messages.
>
> 2. Run the program writing whereis and the name of the person that you looking for (e.g.
> cssbct). The server will display a message that is waiting for the client. After you run the
> client the server window will display messages with the ip address that are you connect
> from, and it will display the date and the time. It will display also the request for which
> displays the name requiring from the client as show in the screenshot below.
